SUNTORY FLOWERS

SunrosaTM Roses

Compact Sunrosa roses are ideal for small to medium landscape spaces and patio containers. Plants have an upright, bushy habit, but only reach a height of 15-24 inches with a spread of 12-18 inches. Sunrosa roses need less pruning and are easy to care for. Compact plants are covered with blooms that are 1.5-2 inches in diameter.

Both Sunrosa Red and Sunrosa Yellow received perfect scores for foliage quality in the University of Georgia's trials assessing disease resistance. While both varieties were named Best of Species in Penn State University's trials in 2013, Sunrosa Red also was named a Top Performer at Mississippi State University and a Plant of Distinction at University of Georgia, where it won the Classic City Award in 2012.

Outstanding new landscape roses with manageable growth!

- Highly disease resistant
- Low maintenance
- Compact and bushy habit
- Long flowering period
- Hardy to Zone 5

Red ZARSBJOH

Sunrosa's signature red variety is a top garden performer and stunning where ever it's planted.

Soft Pink

Light, powder pink flowers bring a feminine touch to any garden. Mixes nicely with pastel colors.

Yellow ZARSBSUN

Soft yellow flowers offer a hint of fragrance and work nicely in so many color schemes.

NEW

Fragrant Pink

Gorgeous, fragrant flowers that resemble mini peonies! Dark and light pink tones add elegance to each petal.

NEW

Orange Delight

This sunny delight has colors you'd find in a large hybrid tea rose! Petals blend from bright yellow to a peachy orange mango.

Production Tips

Potting	Transplant the plug into a 2-gallon pot in well-drained soil. Water at the base of the cutting and keep the foliage dry.
Water	Maintain a good watering routine but do not leave the plants in standing water.
Fertilizer	Fertilize when potted and maintain ongoing fertilizer program for roses.
Light	Grow in full sun for best results.
Temperature	Optimum temperatures are 55-65° at night and 70-80°F days. Maintain good air circulation throughout the production area.
Pruning	For best results, keep plants well-trimmed, starting about 4-6 weeks after transplant.
Finish Time	From potting to finish is about 12-16 weeks, depending on culture, growing zone and season.
Disease & Pests	In trials, Sunrosa varieties have been resistant to mildew, downy mildew and blackspot. Monitoring for possible pests and diseases is recommended.
Growth Regulators	No growth regulator is needed. Sunrosa is naturally compact.

Sunrosa Yellow	2013 Best of Species Penn State University

Allan Says:

I was taken with Sunrosa's retail friendly size and wanted to evaluate leaf health and flower power in the very challenging heat and humidity of Athens, Georgia. 'Sunrosa Red' was glorious, and even though considerably smaller than all the other roses we were grading, plants more than held their own.
– Allan Armitage, University of Georgia
